

AMENDMENTS TO THE CLAIMS

1. (Original) A method for manipulating receipt data, the method comprising:
selecting a first line item from a first electronic receipt, thereby forming a list; and
authorizing a group of people to review the list.
2. (Original) The method of claim 1, further comprising the step of
reviewing the list, the reviewing performed by one of the group of people.
3. (Cancelled)
4. (Cancelled)
5. (Original) The method of claim 2, further comprising the step of
placing a order for the first line item.
6. (Original) The method of claim 2, wherein the step of reviewing comprises
viewing and commenting on the list.
7. (Original) The method of claim 1, further comprising the step of
selecting a second line item from the first electronic receipt and adding that second line item to
the list.
8. (Original) The method of claim 1, further comprising the step of
selecting a second line item from a second electronic receipt and adding that second line item to
the list.
9. (Withdrawn) A method for purchasing goods, including services, from multiple merchants, the
method comprising:
selecting first and second goods for purchase on respective first and second websites; and
paying for the first and second goods with one transaction from a consumer perspective.
10. (Withdrawn) The method of claim 9, wherein the step of paying comprises
automatically placing first and second orders for the first and second goods with the respective
first and second websites.

11. (Withdrawn) The method of claim 9, wherein before the step of paying, the following step is performed:

juxtaposing a reproduction of the first selected goods to a reproduction of the second selected goods.

12. (Withdrawn) The method of claim 10, further comprising the step of downloading the retrieved electronic record.

13. (Withdrawn) The method of claim 10, further comprising the step of viewing an advertisement during the step of retrieving.

14. (New) A method according to claim 1, further comprising:
participating in a first transaction at a first merchant, thereby generating said first electronic receipt.

15. (New) A method according to claim 8, further comprising:
participating in a first transaction at a first merchant, thereby generating said first electronic receipt; and
participating in a second transaction at a second merchant, thereby generating said second electronic receipt.

16. (New) A system for manipulating receipt data, the system comprising:
a first e-merchant operable to generate an electronic receipt;
a data farm coupled to said first e-merchant and configured to store said electronic receipt; and
a shopping service coupled to said data farm and configured to retrieve said electronic receipt for a consumer and allow the consumer to select a line item from said transaction record, thereby creating a review list.

17. (New) A system for manipulating receipt data according to claim 16, further comprising:
a second e-merchant coupled to said data farm and operable to generate a second electronic receipt, said data farm further configured to store said second electronic receipt; and said shopping service further operable to retrieve said first and second electronic receipts.

18. (New) A computer program product for manipulating receipt data comprising a computer readable memory and a program module, the program module including instructions directing a processor to:

select a first line item from a first electronic receipt;
storing the selected first line item in a storage location to form a list; and
authorize a group of people to review the list.

19. (New) A computer program product according to claim 18, wherein the program module further includes instructions directing a processor to:

select a second line item from a second electronic receipt and adding that second line item to the list.
